

• THE CENTRAL VACUUM SYSTEM

How it works?

Connected by a built-in network of pipe and inlet valves strategically positioned around the house for easy access, central vacuum units are ordinarily located out of the family's living area, such as a closet or garage. The system is activated by simply inserting the hose into any of the wall inlets; adding your favourite tools; and begin cleaning.

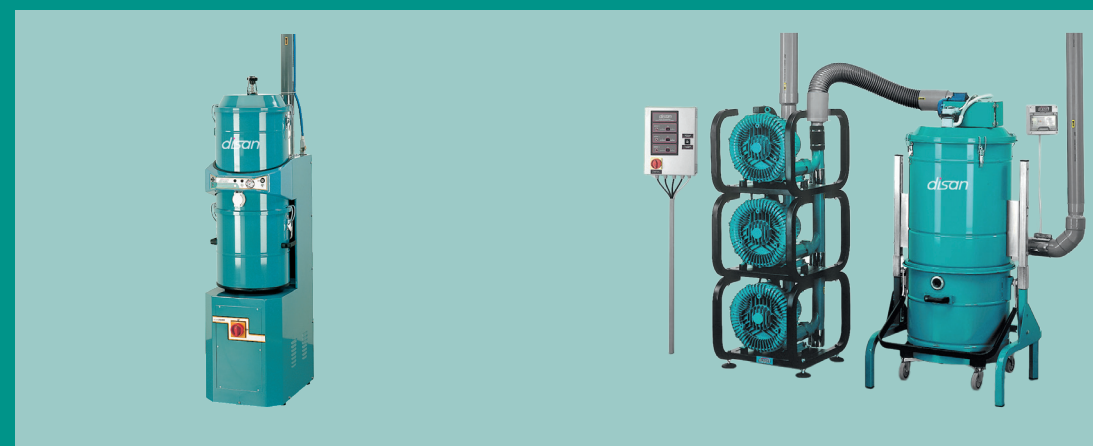

Simple. Powerful. Convenient. Quiet.

Central Vacuum Systems

PRN0341

Compact Systems

Available with either single- or three-phase motors, this is the perfect solution for big apartments, villas, offices, restaurants, small communities, shops, and the like. For even more power and flexibility, self-cleaning filters and electronic inverters can be added for vacuuming with 2 simultaneous users. Great for environments requiring quick and frequent cleaning with lower costs.

Modular Systems

Disan offers three-phase systems for professional use, perfect for large buildings with several stories, hotels, schools, banks, theatres, cinemas, hospices, large residences, trading buildings, etc. All systems are available with self-cleaning filters and electronic control modules for up to 6 simultaneous users. Ask for our Modular Systems technical brochure.

Central Vacuum Systems

AT HOME...

IN A HEALTHY WORLD

ABSOLUTE HYGIENE & PERFECT CLEANING

Traditional upright vacuums exhaust fine dust, mites, allergens and other bad-smelling particles back into your home's air. Their filters and bags are breeding grounds for bacteria, multiplying each time the vacuum is turned on. **With a central vacuum system, there is a better way.** Even the finest micro-particles are exhausted outside the living space, keeping you safe from harmful bacteria and annoying allergens that can accumulate in the home. The CVS **eliminates definitely dust and bacteria from your home.**

POWERFUL, CONVENIENT AND QUIET

As convenient as plugging into the nearest inlet, the lightweight hose makes it easy to manoeuvre in and around rooms and furniture, removing dirt and debris quietly and efficiently from the living environment. A central vacuum's powerful motor and large filter ensure you need only clean once, unlike traditional vacuums where you need to work 2 or 3 times as hard for the same result. **Stop worrying and spend the time you save vacuuming with your family.**

DURABILITY AND VALUE

With durability and reliability in mind, Disan central vacuum systems are designed for the long haul. At the heart of these systems are robust by-pass motors, which -unlike less durable motors- keep separate the "air" of the "debris" stream from that of the "motor-cooling" stream, thus ensuring longer life and fewer motor "burnouts". Central vacuum systems are an important addition to your home, requiring little maintenance but adding significant value when it comes time to sell - **a good deal that will pay for itself.**
